

American Scholastic Mathematics Association Practice Questions

1. Find the units' digit of 17^{17}
 ↑
 the ones digit.

$$\begin{array}{cccccc}
 17^1 & 17^2 & 17^3 & 17^4 & 17^5 & 17^6 \\
 \underline{17} & \underline{289} & \underline{4913} & \underline{83521} & \underline{1419857} & \underline{2413769}
 \end{array}$$

(7)

pattern 7 9 3 1 7 9

2. In base x (x is a positive integer), $35 + 35 + 35 + 35 = 164$. Express x in base 10.

$$\begin{aligned}
 35_x &= 3x + 5 \\
 164_x &= 1x^2 + 6x + 4
 \end{aligned}$$

$$\begin{aligned}
 4(3x+5) &= x^2 + 6x + 4 \\
 12x + 20 &= x^2 + 6x + 4 \\
 0 &= x^2 - 6x - 16 \\
 0 &= (x-8)(x+2) \\
 x &= 8 \quad x = -2
 \end{aligned}$$

3. If c and d are positive integers, such that $36 + d^2 = c^2$, compute the largest possible value of $c + d$.

$$\begin{array}{r}
 c+d = 36 \\
 + c-d = 1 \\
 \hline
 2c = 37 \\
 c = 18.5 \quad \times
 \end{array}$$

$$\begin{aligned}
 36 &= c^2 - d^2 \\
 36 &= (c+d)(c-d) \\
 \begin{array}{cc}
 6 & 6 \\
 \hline
 36 & 1 \\
 18 & 2 \\
 12 & 3 \\
 9 & 4
 \end{array}
 \end{aligned}$$

$$\begin{array}{r}
 c+d = 18 \\
 + c-d = 2 \\
 \hline
 2c = 20 \\
 c = 10 \quad \checkmark \\
 c+d = 18 \\
 10+d = 18 \\
 d = 8 \quad \checkmark
 \end{array}$$

(c+d = 18)

4. The number 28 (base x) has three times the value of the number 28 (base 10). Find x .

$$28_x = 2x + 8$$

$$28_{10} = 20 + 8$$

$$28(3) = 2x + 8$$

$$84 = 2x + 8$$

(x = 38)

5. An interior angle of a regular polygon is 165 degrees. Find the number of sides of the polygon.

$$180 - \text{int. } \angle = \text{ext } \angle$$

sum of ext $\angle = 360^\circ$ for all polygons

$$180 - 165 = 15$$

$$\frac{360}{15} = 24$$

(24 sides)

6. If x , $2x + 3$, and $4x$ are the first three terms of an Arithmetic Progression, find the numerical value of the fourth term.

$$x, \quad 2x+3, \quad 4x$$

$\xrightarrow{+d}$ $\xrightarrow{+d}$

$$6, \quad 15, \quad 24, \quad (33)$$

$\xrightarrow{+9}$ $\xrightarrow{+9}$ $\xrightarrow{+9}$

$$(2x+3) - x = 4x - (2x+3)$$

$$x+3 = 4x - 2x - 3$$

$$x+3 = 2x - 3$$

$$3 = x - 3$$

$$x = 6$$

7. An integer is represented by a two-digit base ten numeral. If 3 times the sum of its digits is added to the integer, the result is the original integer with its digits reversed. Find all such integers.

$$\begin{array}{r} x \\ \underline{y} \end{array}$$

$$\begin{array}{r} y \\ \underline{x} \end{array}$$

value of integer: $10x + y$

$$3(x+y) + 10x + y = 10y + x$$

$$3x + 3y + 10x + y = 10y + x$$

$$13x + 4y = 10y + x$$

$$\frac{12x}{6} = \frac{6y}{6}$$

<u>x</u>	<u>y</u>
1	2
2	4
3	6
4	8

or $-21, -42, -63, -84$

8. In a parallelogram ABCD, the bisectors of interior angles ABC and BCD intersect at P. Find the degree measure of angle BPC.

$$m\angle ABC + m\angle BCD = 180^\circ \quad \text{Supplementary}$$

$$\text{so } m\angle PBC + m\angle PCB = 90^\circ \quad \text{complementary}$$

$$\text{so } m\angle BPC = 90^\circ$$

9. The length of a side of a rhombus is 10 and the length of a diagonal is 16. Find the area of the rhombus.

$$A = \frac{1}{2} d_1 d_2$$

$$\text{or } A = 4 \text{ triangles}$$

$$A = \frac{1}{2} (16)(12)$$

$$A = 4 \left(\frac{1}{2} (6)(8) \right)$$

$$A = 96 \text{ units}^2$$

$$A = 96 \text{ units}^2$$
